****Press Release****

For Immediate Release: September 9, 2024

****Evergreen Emergency Services (EES) Integrates Deep Technology for Next-Gen Firefighting Solutions: Plans for Strategic Collaboration with Australia's Rural Fire Service****

Beijing, China – In response to the increasing threat of bushfires driven by global warming, Evergreen Emergency Services (EES), under the visionary leadership of Lin Changqing, has unveiled an advanced firefighting drone. Powered by cutting-edge deep technology and Internet of Things (IoT) systems, the drone is set to revolutionize wildfire management worldwide. To further develop and deploy this life-saving innovation, EES is proposing a strategic collaboration with Australia's Rural Fire Service.

****Harnessing Deep Technology for Fire Detection and Response****

The EES firefighting drone incorporates deep technology, combining IoT with advanced sensors, real-time data analysis, and artificial intelligence to create a comprehensive wildfire management tool. This drone is designed to address the growing challenges posed by more intense and frequent bushfires due to climate change. Its key features include:

- ****Early Fire Detection:**** IoT-powered sensors detect temperature fluctuations and smoke in remote or hard-to-reach areas, providing crucial early warnings.
- ****Rapid Response Capabilities:**** With a 75-minute operational endurance and a payload capacity of 80 liters of water-based or dry powder extinguishing material, the drone can effectively suppress fires in otherwise inaccessible locations.
- ****AI-driven Precision Targeting:**** Using a first-person view (FPV) crosshair aiming system, the drone delivers pinpoint accuracy in targeting fire zones, maximizing its extinguishing efforts.
- ****Real-Time Data and Insights:**** As the drone surveys the fire from above, it relays live data to command centers, enhancing decision-making for on-the-ground firefighting crews.

****Collaborating with Australian Rural Fire Service****

Recognizing the severity of Australia's bushfire seasons, EES has proposed a groundbreaking partnership with Australia's Rural Fire Service to tailor this firefighting drone for the country's unique conditions. The collaboration will involve:

福建永安物业管理有限公司

FU JIAN EVERGREEN PROPERTY MANAGEMENT CO.,LTD.

- **Establishing a Manufacturing and Research Hub in Australia:** This facility will focus on adapting the drone to the Australian landscape, fine-tuning its operational capabilities, and integrating it into national firefighting strategies.
- **Enhanced Bushfire Response:** By utilizing the EES drone's early detection and rapid response capabilities, the Rural Fire Service will be equipped with an advanced tool to combat wildfires in real-time, ultimately saving lives, property, and ecosystems.
- **Global Distribution:** Once refined, this drone technology will be made available for wildfire management worldwide, offering an innovative solution to countries grappling with increasing fire risks.

Lin Changqing's Vision: A Future of Resilient Firefighting

"We are committed to delivering solutions that not only tackle today's bushfire challenges but also anticipate tomorrow's," said Lin Changqing, CEO of Evergreen Emergency Services. "By combining our deep technology innovations with Australia's expertise in firefighting, we aim to set a new global standard for wildfire management."

As EES prepares to enter into formal talks with Australian authorities, this collaboration marks a pivotal step toward a safer, more resilient future in the face of climate change's growing impacts.

About Evergreen Emergency Services (EES)

Evergreen Emergency Services (EES) is a leading innovator in emergency response solutions, specializing in the development of advanced technologies for fire management. Under the leadership of Lin Changqing, EES is dedicated to pioneering next-generation tools that enhance the safety and efficiency of firefighting operations worldwide.
